

Everything to hand, just where you need it. Stainless steel wall-mounted shelving can be used for storage, temporary storage and provision of equipment and ingredients needed in food preparation and other operations of a commercial kitchen. Procedures are improved, for instance, by storing utensils and ingredients within reach of the preparation table while keeping the working surface clear. The adjustable rails make it possible to adjust the individual shelves without the need for tools so that, in addition to optimal adjustment to the items stored, the height of the user can also be ergonomically accommodated in the best possible way.

The strong overall construction from stainless steel, high-quality components and a high level of manufacturing quality ensure reliable and long-term use - even under the most demanding conditions. The position of the brackets on the adjustment rail can be changed, in 75mm steps, quickly and without the need for tools. The shelves are simply inserted into the brackets, where the construction ensures that they are rigidly connected to prevent tilting and slipping. The wall-mounted shelves are chamfered, folded and welded and ground at the corners to prevent injury and to ensure hygiene is maintained during use.

DIMENSIONS

300D x 600W/800W/1000W/1200W/1400W x 750H mm

TECHNICAL DATA

Capacity: 1 or 2 Tier Shelving Options holding up to 27 to 63kg per shelf
 600W x 300D mm shelf - 27kg
 800W x 300D mm shelf - 36kg
 1000W x 300D mm shelf - 45kg
 1200W x 300D mm shelf - 54kg
 1400W x 300D mm shelf - 63kg

Material: AISI 304 stainless steel

Wall Shelf Rail: 25mm Deep x 75mm Long

SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
